

# UNIPAYS USER GUIDE

## **ABOUT THE UNIPAYS APP**

The UNIPAYS app is basically a FinTech Application with extra features like

Payment of fees in installments

Access to student loans

Access to food and transport tickets

Purchase of airtime, data, etc

Normal bank transactions like transfer, fund, withdrawal, etc

It also gives students the ability to edit their profiles, upload a profile image, download transaction receipts, etc.

You can also view the latest currency exchange rates

Dark mode for easy visibility

Ability to change PIN

Smart savings

## FEW THINGS TO NOTE

UNIPAYS uses your browser's local storage to store data.

Everything you do on the UNIPAYS application is only visible to your browser. The UNIPAYS application does not have a server.

On every page refresh, the profile picture uploaded is cleared. This is due to the fact that we used local storage for the data storage.

You can create as many accounts as you want and play around with the accounts.

You cannot transfer money to yourself.

I took my time to carefully design an UI that conforms with that of other FinTech applications. The UNIPAYS application is very easy to navigate. Just follow the instructions on this guide.

## **FEW THINGS TO NOTE**

There are some other features in the UNIPAYS application that I won't talk about in this guide .

However, every other feature I didn't include in this guide is super easy to use and also self-explanatory.

As you navigate the application, there are instructions to take.

Now as you test our application, feel free to explore and do all you want with the UNIPAYS application.

## **ON NEW ACCOUNTS**

Each new account you create in this application gets a total of 58,000 naira as their current account balance.

## **BUILT IN ACCOUNTS**

If you don't want to open a new account, I added to accounts to the application.

## **ACCOUNT1**

**PLEASE NOTE THAT THE  
PASSWORDS ARE CASE  
SENSITIVE**

## **R E S P O N S I V E N E S S**

I built this application mainly for mobile devices but you can also check this application on your laptop, tablets and larger screen devices. I made sure that the UNIPAYS application is fully responsive with most of devices used around us.

## **C U R R E N C Y   E X C H A N G E**

For the currency page, I used a free API with a maximum of 500 API calls per month. We apologise in advance if you cannot get the current exchange rates.

There might be a slight variations in the exchange.

**U N I P A Y S   O P E R A T I O N S  
N E X T   S L I D E**

## ABOUT THE DEVELOPER

Hi, I'm Ochuko and I built this whole application with my Android phone. I built this application for the UIRESDEV Hackathon. I hacked solo and this whole project took me about 3 weeks to complete.

I am a Frontend developer and I love bringing designs to life with JavaScript skills. My Tech stack includes HTML, CSS, JAVASCRIPT AND REACT.

## TECHNOLOGY USED FOR THIS PROJECT

CODE EDITOR : ANTWRITER APP

HTML                    CSS

JAVASCRIPT            CANVA

I built everything in this project without any framework or library. Everything is based on vanilla HTML, Vanilla CSS and Vanilla JAVASCRIPT
